

We do our level best

To whom it may concern:

About 15 years ago a likeable gentleman with a British accent passed through our doors with a new oil filtration system, which was going to not only save us money in oil purchasing but also extend the life of our diesel engines. With an understanding of the concept and its applications and with extended oil service just becoming an accepted option with engine manufacturers, we felt we should give it a try. We equipped a few units, which were in our dirtiest working environment to do a trial testing. We extended our oil change interval from 200 hrs to 600 hrs and began intensive oil sampling and monitoring.

It wasn't long before we realized the benefits in the costs savings of oil, labour, and disposing of the old oil, now classified as hazardous waste. The oil sample reports gave us the piece of mind that we were not sacrificing anything to achieve these cost savings. Also soon noticed was the cleanliness of the oil and internal components.

We have also given up on the traditional "bearing roll-in" recommended by some engine manufacturers, as a means of achieving the full life of the engine. We have prevented major engine failures from just the visual and physical condition of the Kleenoil filter itself. Our service intervals are now at 250 hours, extending our drain interval to 750 hrs, or twice a year on most pieces of equipment and vehicles. We have the Kleenoil filtration on all our diesel engines and even some of our gas powered vehicles. We have begun installation on our hydraulic units as well. Our portable filtration unit has become one of our most valuable tools for transferring and cleaning of most fluids.

Kleenoil is continually making improvements to the quality of their system and its components and has always listened to our suggestions and concerns. As soon as we receive a new unit, the first call is to Kleenoil to have their filtration system installed.

I believe the benefits of this system to be substantial and recommend it to any individual or company. As the old saying goes, "It's easier to save a buck than to make a buck", this surely applies to our relationship with Mr. Barry Phillips and Kleenoil Filtration Canada Ltd.

Sincerely,

Mike Felker Equipment
