To Whom It May Concern,

We began using Kleenoil early in 2007 here at our operations in Waco, Texas. We have discovered this technology to be state of the art and superior to traditional PM methods of maintaining engine oil. In our earliest installations, we went beyond a year (about 3,000 engine hours) and have settled with a single annual oil/filter change schedule to keep it easy.

We have over a third of our 100+ unit fleet installed and intend to fit all of our equipment with Kleenoil. These units are easily installed and have already paid for themselves. We have cut oil consumption by 80% and are able to avoid expensive synthetic oils by using the PowerUp line of oil additives.

Over the life of a truck we will cut our PM oil related expenses down to way less than half and benefit to an even greater degree with extended engine life by running super-cleaned oil all of the time. With the on-line accessed oil lab records we have permanent visibility of each engines' health with specific recommendations on whether or not to change oil by a named tech always available by phone.

It is staggering to realize the amount of oil we were using and not fully utilizing the conservation methods that were available. We now have full peace of mind knowing that our engines are running on the cleanest oil possible and we are enjoying the greatly reduced costs of running Kleenoil, and we are now a 'Green Company'.

We see this technology as being vital to equipment owners and cannot see our company without it in the future.

Sincerely,

A handwritten signature in black ink, appearing to read "Weldon Ratliff". The signature is fluid and cursive, with the first name being more prominent.
