To Whom It May Concern

We at Schooner Transport are always looking for new technology to help reduce the costs associated with running a transport fleet. We have been using oil analyses as a key tool to help extend our drain intervals on our oil changes.

Since we have switched to Chevron Delo 400 with the help of Kleenoil Filtration Systems, we have twice had oil samples return a admirable report after running the unit's over the 100,000 km mark.

We would not hesitate to inform others of the results we have had using Kleenoil and Chevron Delo 400 15W40. We have the oil sample reports to prove it.

Should you require additional information, please do not hesitate to call.
