Re: Kleenoil System

Transport Leasing & RB Equipment Supplies Ltd is based in Tauranga. We own and maintain a fleet of lease equipment while also offering our maintenance services to other companies.

We fitted a Kleenoil system to one of our Omega 54D's in June 2009.  
The regular service interval for this unit is 250 hours.

With the use of the Kleenoil system we extended the oil drain interval to 2000 hours.  
We used oil analysis during this period to ensure the oil was good for continued use.  
The oil analysis reports showed that the oil was still good for continued use throughout the 2000 hours, maintaining an evaluation code of 'A', and an ISO code of 16/13  
This was impressive due to that fact that the equipment was working in the port of Tauranga which is a tough environment for any piece of machinery.

Going from 250 hours to 2000 hours produced considerable savings in downtime and labour, while the oil savings alone showed that Kleenoil system more than paid for itself.  
We are now looking to install the Kleenoil system onto all of the equipment we own, as well as helping to introduce it to our clients.

Yours Sincerely,

Adam Joyce
