To Whom It May Concern

Tranzliquid is a specialised bulk fuel and dangerous goods transport and Logistics Company based in Tauranga, New Zealand.

We first looked at the Kleenoil filtration system in August 2009. We were impressed that it is a very simple and uncomplicated system. Our service provider found that It was quick to install and very easy to change filter cartridges.

After running a pilot with the Kleenoil, with regular oil analysis, we found we were able to safely extend our oil drain interval out to 100,000 kilometers and achieved ISO code readings of 12/9.

Besides the significant savings in oil, the Kleenoil filtration systems allow us to keep the wheels turning through less downtime and give us piece of mind that we are taking steps to ensure less filtration related maintenance issues over the life of the vehicle.

We are now installing the Kleenoil filtration system onto the rest of our fleet.

I would recommend Kleenoil to anyone that has their own equipment as a cost saving initiative while improving the sustainability of the fleet and operation. Another benefit is that by using this system we reduce impact on the environment.

Sincerely,

A handwritten signature in blue ink that reads "Gregory P. Pert".
